

Enjoy the Benefits of HVLP with a Fuji!

The Gravity Gun G-XPC™

The Fuji G-XPC™ Gravity Gun can be substituted for the standard XPC with any 3 or 4-stage Fuji Spray System - but is not available with the 2-stage Semi-PRO model.

The specifications are identical to the standard XPC model. The cup is 400cc (.85 pint) and is equipped with a fold-down wire stand. The Gravity Cup is pressurized offering the whole range of spraying. Ideal for Cabinetmakers and smaller shops.

FUJI® SPRAY

The NEW Semi-PRO² System

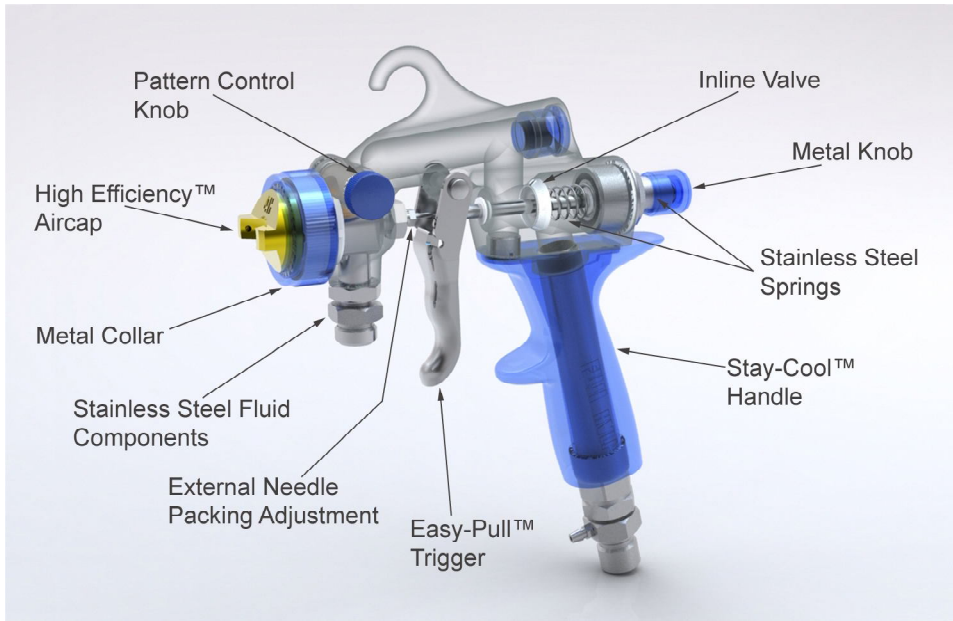

The Semi-PRO 2™ system is designed for serious Hobbyists and Professionals and stacked with features not found on any similar priced systems. The New Fuji Model M-Spraygun is Non-bleed to prevent blowing around of shopdust and overspray. A Pattern Control Knob (rear) adjusts the size of the fan from small round to large (and anywhere in between). The M-Model Gun is light-weight and ergonomic with a Quick Lever-action 1 Quart (1000cc) Cup Assembly.

The Metal Turbine Case encloses a Super-Powerful 1400 watt Bypass Motor that produces enough power to spray any type of coating (when thinned appropriately). A handy Gun Stand is situated on the top of the Turbine.

A full length 25 ft hose includes an Air Control Valve and Quick Connect Coupler to round out the System. Unbelievably priced at \$399.00 (Street Price).

Enjoy the Benefits of HVLP with a Fuji!

The FUJI XPC™ Type Spray Gun

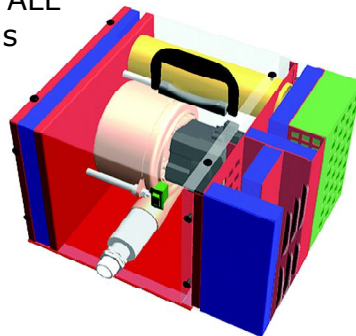

All FUJI Sprayguns are NON-Bleed for less turbulence and also feature a Pattern Control Knob to adjust the Fan pattern size.

The Q-GOLD™ Series Quiet Turbines

Fuji has reduced turbine noise levels by over 50% without causing any unwanted side effects such as overheating or air restriction. The patented method used by Fuji allows the turbine motor to sit in an all-metal enclosure the way that standard turbines do. The Fuji Q-GOLD™ Series Quiet turbines have computer-designed airflow configurations that completely eliminate the 'Direct Sound Paths' found on ALL low to mid-priced HVLP turbine systems available today. Direct sound paths are responsible for the noise factor.

If excessive noise is a problem for you, please consider spending a little more for a Q-GOLD™ Series Turbine. There is no quieter turbine on the market today.

Enjoy the Benefits of HVLP with a Fuji!

The Mini-Mite 3 XPC™ System

The Mini-Mite 3 model is a professional HVLP spray system for those who do not require soundproofing.

The MM3 XPC Turbine develops approximately 6psi. This is more than enough pressure to spray all known coatings (when properly thinned) and all the newer water-based coatings.

A favorite with Cabinet makers, Bathtub Refinishers, Invisible Auto Touch-up Technicians and many more. The exact same specs as our Super 3 and Q-Gold models.

The Super GOLD™ Systems

The Super GOLD™ Systems are available with high performance, 3 or 4 stage, double ball-bearing single speed, Bypass Motors.

The Super models also feature some Patented soundproofing so they are much quieter than standard turbines. The systems are perfect for Cabinet makers, Furniture Refinishers and most trades. Spray cabinets, furniture, autos or pianos - in fact, anything wood or metal with any type of coating!

The Q-GOLD™ Systems

The Q-GOLD™ Series Turbine Systems are available for Paint Contractors spraying House Paints most of the time and for those persons who simply want the best. No other HVLP system on the market can come close to matching all the features of the Fuji Spray® Q-Series.
